EXPERIENCE

OrgLance Technologies LLP

Software Engineer Intern (React Native)

Ahmedabad, India

Jan 2026 – Jun 2026

- Built React Native screens for a cross-platform hospital operations app and added several new REST API endpoints, testing them against both a Node.js/Express.js backend and a Spring Boot backend, with the app deployed on AWS EC2 behind Nginx and static assets served from S3.
- Set up a RabbitMQ queue on the Node.js side to push off notification and report jobs from the main request path, and containerized the backend with Docker so the same image could run consistently across the dev and EC2 environments; also wired up GitHub Actions so new builds went out without a manual deploy step.

SynerSense Pvt. Ltd.

Software Engineer Trainee

Ahmedabad, India

Mar 2025 – Aug 2025

- Developed a Next.js frontend for a patient vitals dashboard backed by a FastAPI service, piping sensor readings from Arduino hardware through Kafka into the backend and running a PyTorch model for anomaly detection, all deployed on AWS EC2 behind Nginx.
- Tuned the PostgreSQL queries behind the dashboard and added Redis caching for the readings that got hit most often, since the raw Kafka stream was making the DB the slow point; kept track of model runs and accuracy across versions in MLflow as we retrained on new data.

PROJECTS

CodeX – Real-Time Collaborative Code Editor

[Project Link](#)

- Built a real-time collaborative code editor with Next.js and Monaco Editor, using Socket.IO and WebRTC for live cursor sync and peer video calls, Judge0 and a self-hosted Piston server for code execution, and set it up as a Turborepo monorepo deployed on Vercel and Render with GitHub Actions CI/CD (1st Rank, HackOple 2025).

Plant Disease Detection

[Project Link](#)

- Built a plant disease detection app with a React/Vite frontend and a FastAPI backend serving a fine-tuned PyTorch CNN model hosted on Hugging Face Hub, with background model warm-up on startup and the frontend deployed on Vercel.

URL Shortener

[Project Link](#)

- Built a URL shortener using Next.js Server Actions with MongoDB for storage, added Clerk authentication and a click-tracking analytics dashboard, and deployed the app on Vercel.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML, CSS

Frameworks & Libraries: React.js, React Native, Next.js, Node.js, Express.js, Spring Boot, FastAPI, PyTorch

Databases: PostgreSQL, MongoDB, Redis

Cloud & Tools: AWS (EC2, S3), Docker, Nginx, Kafka, RabbitMQ, MLflow, Socket.IO, WebRTC, Git, GitHub Actions, Vercel

ACHIEVEMENTS

- 1st Rank, HackOple 2025** – Won 1st place at HackOple 2025 (Milople Technologies) for building a real-time collaborative code editor with WebRTC, Socket.io, and Kafka.
- Grand Finalist** – InnovAtion 2026 (Intuitive.AI), TechManjari 2025 (GMIU), YogaTech 2024 (Startup India, S-VYASA), IDE BootCamp 2024 (MoE Innovation Cell, SVNIT), and SSIP Hackathon 2023 (PDEU).
- Research Cell & IT Cell** – Conducted AI/ML research published internally and contributed features to the college ERP portal used by 1,000+ students and faculty.
- Founder & Mentor, Coding Club** – Founded and scaled a 150+ member coding club; delivered 30+ weekly sessions covering DSA, JavaScript, Python, and AI/ML to undergraduate students.

EDUCATION

Gujarat Technological University

B.E. in Information Technology

Bhavnagar, India

2022 – 2026
